Environmental Constitutionalism in the Anthropocene is a groundbreaking new book that examines the legal challenges of climate change. The book argues that we need to develop new legal frameworks that can protect the environment in the Anthropocene. These frameworks must be based on the recognition that the environment has rights, and that humans have a responsibility to protect those rights.

The book is divided into three parts. The first part provides an overview of the Anthropocene and its legal implications. The second part examines the existing legal frameworks for environmental protection. The third part proposes new legal frameworks for the Anthropocene.

The book's first part begins with a discussion of the scientific evidence for the Anthropocene. The authors then examine the legal implications of the Anthropocene, including the challenges to traditional notions of sovereignty and property rights. They argue that we need to develop new legal frameworks that can address the unique challenges of the Anthropocene.

The book's second part examines the existing legal frameworks for environmental protection. The authors provide a comprehensive overview of international environmental law, national environmental law, and constitutional environmental law. They argue that the existing legal frameworks are inadequate to protect the environment in the Anthropocene.

The book's third part proposes new legal frameworks for the Anthropocene. The authors argue that we need to develop new legal frameworks that are based on the recognition that the environment has rights. They propose a number of specific legal reforms, including the adoption of a global environmental constitution, the recognition of the rights of nature, and the creation of new environmental courts.

Environmental Constitutionalism in the Anthropocene is a timely and important book. It provides a comprehensive overview of the legal challenges of climate change, and it proposes a number of innovative
