The Plan

The plan outlined in this book includes a number of specific strategies to transform the healthcare system. These strategies include:

- **Negotiating lower drug prices:** The government would negotiate lower drug prices with pharmaceutical companies.
- **Investing in primary care:** Primary care is the most cost-effective way to prevent and treat chronic diseases.
- **Using data to improve care processes:** Data can be used to identify and address inefficiencies in the healthcare system.

The Benefits

The plan outlined in this book would have a number of benefits, including:

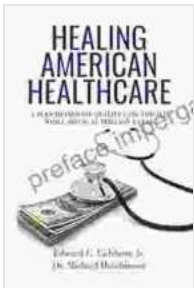

- **Improved access to care:** Everyone would have access to quality healthcare, regardless of their income, race, or geography.
- **Reduced costs:** Healthcare costs would be reduced by trillions of dollars.
- **Improved quality of care:** Everyone would receive high-quality healthcare that is based on the latest evidence.
